in [targiroldo](https://www.linkedin.com/in/targiroldo)

I'm a senior software engineer with over 8 years of experience across several types of business. Mainly focused on Typescript and it's ecosystem. Highly experienced in, refactoring apps, unit testing, performance and observability. I'm also like to study new techs like Rust and Elixir. In my free time I like to read and spend time with my dog, family and friends

Employment

- November 2025 – Present **Instituto Eldorado**, *Senior Software Engineer*, Campinas, Brazil - Remote
- Languages and frameworks used: Typescript, React, Python, FastAPI, YAML, shell scripting
 - Leading a cross-functional team of six to deliver enterprise product for Motorola (Lenovo company).
 - Working assigned on Motorola (Lenovo company), leading the architectural evolution and a cross-functional team of six to deliver enterprise product.
 - Mentoring internships and junior engineers, providing guidance and support to help them grow in their careers.
 - Migrated state management to Zustand and data-fetching to TanStack Query.
 - Pivoted UI architecture to Ant Design and Tailwind CSS 4.
 - Architected a complex system using @dnd-kit for intuitive device layout configuration.
 - Bridged the gap between engineering and product stakeholders.
- January 2024 – November 2025 **Bosch**, *Senior Software Engineer*, Campinas, Brazil - Remote
- Languages and frameworks used: Java, Spring, Javascript, React, jQuery, Rust, Selenium, Cypress, Playwright, Jenkins
 - Refactored legacy Java codebase to improve maintainability and performance, implementing modern design patterns and best practices in the Spring framework.
 - Integrated Spring backend services with high-performance Rust components for specialized processing.
 - Modernized legacy frontend by embedding React components into an existing jQuery architecture, bridging legacy systems with modern reactive interfaces.
 - Adapted and implemented enterprise design system from ETAS (Bosch company), standardizing UI components and enhancing user experience (UX).
 - Designed automated testing strategies for legacy components and authored comprehensive E2E integration tests using Selenium, Cypress, and Playwright.
 - Conducted rigorous peer code reviews to ensure code quality, architectural consistency, and team-wide engineering excellence.
 - Delivered features and bug fixes iterated through SCRUM sprints via Jira, maintaining CI/CD automated pipelines with Jenkins.

July 2022 – **Spocket**, *Frontend Engineer*, Vancouver, Canada - Remote

- January 2024
- Languages and frameworks used: Javascript, Typescript, React, Next.js, Python, Django, YAML
 - Worked as Frontend Engineer using React and it's ecosystem (CRA, Next.js, using ES6+, React Hooks, React Query, Redux, Context API, Jest, RTL and our design system)
 - Maintained overall codebase, keeping all libraries updated
 - Developing new features following company's code standards and best practices. iterated through SCRUM from the board using Zenhub, Jira and Monday to manage
 - Refactoring old components to ES6+ (class components to functional components).
 - Created unit tests guide to help the team.
 - Developed new unit tests and improved the unit test percentage
 - Implemented a new CI/CD pipeline using Github Actions, AWS S3 and Cloudfront
 - Actively involved in a Django web app using React as frontend
 - Worked in side projects using Next.js for our suppliers

April 2021 – **Dasa**, *Software Engineer*, São Paulo, Brazil - Remote

- July 2022
- Languages used: Javascript, Typescript, YAML
 - Worked as Frontend Engineer with React (using ES6+, React Hooks, Context API, React Testing Library and Ant Design).
 - Developed new features and fixed bugs iterated through SCRUM from the board using Jira.
 - Refactored old components to ES6+(class components to functional components), improving the DX of our design system
 - Created a code standard based on the best practices community
 - Created new unit tests and improved the test coverage of the codebase to 80% (company standards)
 - Improved the CI/CD pipeline using Jenkins reducing problems and time on processing (30% decreased)

August 2020 **Softwrap**, *Full Stack Engineer*, São Paulo, Brazil - Remote

- April 2021
- Languages used: Javascript and Typescript
 - Worked with React and React Native, Node.js, Firebase and Docker
 - I was responsible to coordinate a specific team for the development of a hybrid application using React Native and Firebase for meal tickets from a disclosed company
 - Led a team of 3 developers
 - Helped and taught the less skilled developers
 - Created a pixel perfect React Native application for accountability of accounting firms

February **SmartEnvios**, *Full Stack Engineer*, Ribeirão Preto, Brazil

- 2020 – June 2020
- Languages used: Javascript, HTML5, CSS3, Shellscript
 - Worked as Full Stack Engineer with React, Gatsby, TailwindCSS, Node.js, PostgreSQL, MongoDB and Docker
 - Created company's website using Gatsby and TailwindCSS
 - Developed crawlers using Node.js, Puppeteer and Cheerio for scraping and crawling.
 - Deployed on LightSail, uploading the exchange data to S3 and registering all operations in PostgreSQL.
 - The monitoring process was done using PM2 and the deploying of this related service.

Education

2012 – 2020 **BSc in Biomedical Informatics**, *Universidade de São Paulo*, Ribeirão Preto, São Paulo, Brazil

- During my BSc in biomedical informatics I worked as a intern researcher in bioinformatics
- Gained expertise in data analysis using R, more specifically ggplot2, tidyr, dplyr, bioconductor packages (like limma and GEOQuery), and the creation of dashboards using Shiny.
- Strengthened my Linux and shellscript core using to manage virtual machines and administrate a local server from the lab.
- Also had classes such as Algorithm and Data Structures, Object Orient Programming, Databases and SQL, Machine Learning, Operating Systems and Distributed Systems.
- Learn the basics of C, C++, Java and R.

Languages

Portuguese

- Native speaker

English, C1/C2

- Advanced

Skills

Javascript, Technology

- My native programming language. My first contact was in 2013 but started to work a few years after this
- I've been working with for over 6 years. I've been handling it in the front-end with React 19, using styled-components, Ant Design, TailwindCSS 4 for stylization
- For state management using Context API, Redux, Redux Toolkit (RTK), Zustand and Immer
- Used TanStack Query for asynchronous state management and Vite for build tooling
- Using axios and fetch API for consuming different backends
- For unit testing using React Testing Library (RTL), Jest and Vitest
- I've been working with Next.js using SSR and ISR
- Gatsby for blog and SSG projects.
- I've been using Node.js for backend with Express, NestJS and Fastify, just for fun and learning purposes
- I created scrapers and crawlers using Puppeteer and Cheerio
- Following ES6+ best practices always

Typescript

- Using advanced features from Typescript like type narrowing
- Using Zod for schema validation
- Using Prisma for handling with databases (used with Next.js, NestJS and Fastify)

Python

- Used Python for backends and webscraping
- On backends used to work with Django
- Also used vanilla Python for a creation of an entire project

Java / Spring

- Extensive experience refactoring legacy enterprise codebases into modern Spring architectures
- Implemented design patterns and clean architecture principles in Spring Boot services
- Integrated Spring backend services with high-performance components and polyglot runtimes

Rust

- One of my side languages to create side and personal projects
- Using tokio and frameworks as actix-web and axum
- Using ORMs sqlx and diesel

Elixir

- Side languages for side projects
- Using Phoenix to create APIs and LiveView for fullstack projects
- Handling with databases relational and non relation using Ecto
- Using the tools for code analysis: credo and dialyxir

HTML/CSS

- I am skilled in HTML/CSS and have a particular interest in creating semantic and accessible web applications, following the a11y guidelines
- Experienced working with CSS and applied the BEM methodology to improve code organization and maintainability

R

- Using with Bioconductor packages as limma and GEOQuery.
- Data wrangling and visualization using ggplot2, tidyr, dplyr
- Integrations with relational and non-relational databases
- Used R, Rmarkdown, knitr and LaTeX to generate this CV

DevOps

- Leveraging Docker using Dockerfile and docker-compose to streamline the creation and management of containerized applications
- Continuous integration and continuous deploy with Jenkins, CircleCI, Github Actions
- Cloudflare, Netlify and Vercel for personal projects
- SonarQube for rating code quality and Fortify to enforce code security
- Working with AWS - EC2, S3, Cloudfront, LightSail, Amplify
- Using Terraform and Ansible for IaC
- Proxmox, LXC's for a virtualized environment
- Have my own home server/home lab to deploy my cool stuff

Databases

- Relational such as PostgreSQL
- Non-relational such as MongoDB
- Worked with Firebase in some projects and Supabase for personal projects
