Application for Senior Software Engineer role

Dear Drata HR,

I'm a front-end software engineer with over 6 years of experience across several types of business and a bioinformatics and functional programming enthusiast.

During my BSc in biomedical informatics I worked as a intern researcher in bioinformatics where I gained expertise in data analysis using R, more specifically ggplot2, tidyr, dplyr, bioconductor packages (like limma and GEOQuery), and the creation of dashboards using Shiny. I had classes such as Algorithm and Data Structures, Object Orient Programming, Databases and SQL, Machine Learning, Operating Systems and Distributed Systems. I also gained knowledge learning and using C, C++, R, Java and PostgreSQL.

At Spocket, I worked as a Frontend Engineer leveraging React and its modern ecosystem. I actively participated in bootstrapping new products—planning and crafting company boilerplates, reusable components, and the core design system. I overhauled the CI/CD pipeline, migrating from CircleCI to GitHub Actions (deploying to AWS S3 and CloudFront) and cutting execution times by 50

At Dasa, I engineered frontend solutions for a genomic examination tracking platform used by bioinformatics and clinical genetics teams. I refactored the client state architecture away from Redux by leveraging React Query for server cache synchronization and Context API for local state, while integrating Dasa's custom design system with Ant Design and styled-components. To address an initial lack of test coverage, I built robust unit testing suites with Jest and React Testing Library (RTL) to systematically reach

80

During my time as a Full Stack Engineer at Softwrap, I excelled in coordinating a

dedicated team focused on crafting a seamless hybrid application using React Native and Firebase. Leading this team of 3 developers, I not only delivered on project goals but also nurtured the growth of junior team members through mentorship and guidance. One of my significant accomplishments was creating a pixel-perfect React Native application for the meticulous accounting needs of the firms, showcasing my dedication to precision and attention to detail.

In my previous role at SmartEnvios, I demonstrated my proficiency in a broader technology stack, handling full-stack development using React, Gatsby, TailwindCSS, Node.js, PostgreSQL, MongoDB, and Docker. I successfully contributed to the creation of the company's website, developed web scraping solutions, and implemented efficient deployment strategies.

As a dedicated learner, I continually invest time in expanding my skillset. Currently, I am learning about CI/CD, Terraform, Ansible and Rust.

Thank you for considering my application. I look forward to the opportunity to discuss how my experience aligns with your team's goals in more detail.

Yours truly,

Tarcísio Giroldo
